

The Institute for Johns Hopkins Nursing presents...

A nurse who successfully completes the Guided Care Nursing course will be well positioned to work in many "medical homes" and other organizations that provide comprehensive, coordinated, continuous care to their patients, including those with chronic conditions who require complex services.

REGISTER TODAY!**

Register now for the new online Guided Care Nursing course and become professionally recognized by the American Nurses Credentialing Center as a **Guided Care Nurse**.

Guided Care is an interdisciplinary model of health care designed to improve the quality of life and effectiveness of health care for persons with multiple comorbidities. It uses best practices in chronic disease management, case management, self-management, lifestyle modification, caregiver education and support, transitional care, and geriatric evaluation and management. Guided Care Nurses most often work in primary care in partnership with several providers, empowering patients and caregivers and coordinating patient-centered, cost-effective care.

This 6-week, 40 hour web-based course and examination leads to the American Nurses Credentialing Center's new *Certificate in Guided Care Nursing*.

As a Guided Care Nurse, new career opportunities may be open to you in primary care practices, particularly in settings that implement the "medical home" concept. You may also be interested in the program because you want to learn new skills and be more effective in caring for older adults, particularly those living in the community.
